SUMMARY

SDE with 4 years at Amazon delivering scalable backend and GenAI systems. Reduced infrastructure costs by \$200K/year and accelerated critical workflows by 80% through automation. Passionate about building high-impact, efficient systems at scale.

SKILLS

Languages: Python, Java, JavaScript, TypeScript, SQL

Frontend: React, HTML, CSS

Backend: REST APIs, GraphQL, Microservices, Flask, ETL pipelines

Databases: MySQL, DynamoDB, PostgreSQL

Cloud & DevOps: AWS (EC2, Lambda, DynamoDB, S3), CI/CD, Auto Scaling

Tools & Practices: Git, Agile/Scrum

AI/ML: LLM Workflows, RAG, AI Agents, MCP Servers, Human-in-the-loop Systems, Prompt Engineering.

EXPERIENCE

Software Development Engineer Amazon Music, Amazon • Bangalore, India

Nov 2025 - Present

- Architected AI agent-based CLI tool to automate Financial workflows, reduced cycle time from 10 weeks to 1 week (90%) and eliminated 8–12 hrs manual effort.
- Automated financial modelling workflows including validation, GL mapping, and intake-to-config; accelerated launches and enabled self-serve onboarding while reducing errors and operational risk.

Software Development Engineer AGI Data Services, Amazon • Hyderabad, India

Feb 2024 - Oct 2025

- Owned microservices and UI systems for AGI Content Registry, governing access to 2.6T+ token datasets across Amazon AI teams.
- Redesigned and automated dataset approval system, streamlining an 8-stage evaluation workflow; reduced turnaround 4 weeks to 5 days (80%) and cleared 500+ backlog.
- Built real-time tracking system with metadata-driven status; enabled self-serve visibility and reduced support dependency.
- Developed error attribution feature for LLM workflows; improved debugging efficiency and strengthened quality feedback loops.

Software Development Engineer Alexa Data Services, Amazon • Hyderabad, India

Aug 2022 - Jan 2024

- Contributed to ML data labelling infrastructure securing content for Alexa speech systems.
- Reduced AWS infrastructure costs by 30–40% using auto-scaling and scheduling across 100+ instances; saved \$200K/year without impacting availability.
- Led zero-downtime migration to AWS IAM authentication; eliminated SEV-2 risk, saved ~50 SDE hours, and established team-wide SOPs.
- Built GenAI Human-in-the-Loop platform; improved annotation speed 40% and quality 30% across 100+ annotators and 1M+ samples.
- Shipped 18 LLM workflows in 3 months; reducing development time 50% via reusable multi-modal components.

INTERNSHIPS

Software Development Engineer Intern | Alexa Data Services, Amazon

Feb 2022 - Jun 2022

- Built AWS Lambda scheduling tool, automating interview coordination and reducing manual effort.
- Implemented automated security remediation, improving compliance and reducing operational overhead.
- Improved CI/CD pipelines with approval workflows, increasing deployment reliability.

EDUCATION

GVP college of Engineering(A)

Aug 2018 - May 2022

Bachelor's in Computer Science • GPA: 9.35
